

THE TOUR'S SECRET WEAPON REVEALED...

What do you get when you combine cutting-edge technology with a dedicated design philosophy? **The tour-proven Project X.**

With variable wall thickness and taper rates that have been optimized from flex to flex and club to club, Project X delivers a unique feel, tip stability and unmatched ball control. Now that the tour's secret weapon is revealed, the most comprehensive shaft design can be a part of your game arsenal, too.

PROJECT X

Project X

RIFLE features a different constant taper per inch for each shaft in the set resulting in more energy transfer to the ball. The ball gets up faster and flattens out for a penetrating trajectory.

Rifle

Rifle steel shafts feature patented stepless design and are Frequency Matched. An excellent choice for all players.

Flighted Technology

Flighted technology features a change in kick point within each shaft throughout the set. Long irons provide a lower kick point for higher ball flight and easier launch while the short irons have a higher kick point for a lower trajectory and greater control.

Rifle Spinner Wedge

Originally made for PGA Tour players who like a softer feel in their scoring irons, the Rifle Spinner is a scoring wedge shaft designed for sand, lob and gap wedges.
